

FERROMAGNETIC HANDHELD METAL DETECTOR MR-SAFE
Safe for use inside the MRI room (zone 4).

Product description:

The only handheld MRI patient screening device that can separately detect both ferrous and nonferrous metal objects.

Completely antimagnetic, therefore it can be used inside the MRI room (zone 4) without the risk of being attracted or damaged by the magnet and without affecting its performance or creating a potential projectile risk.

Features:

Separately detects ferrous and nonferrous metal objects

Safe for use inside the MRI room (zone 4)

Completely antimagnetic
